

act locally for sccache

Rohit Goswami · 2026-01-31 · cmdline · build

Cache helpers like `sccache` tend to break local `act` usage, necessitating:

```
- name: Setup sccache
+   if: ${! env.ACT }
   uses: mozilla-actions/sccache-action@v0.0.9
   with:
     version: "v0.10.0"

- name: Setup sccache environnement variables
+   if: ${! env.ACT }
   run: |
     echo "SCCACHE_GHA_ENABLED=true" >> $GITHUB_ENV
     echo "RUSTC_WRAPPER=sccache" >> $GITHUB_ENV
     echo "CMAKE_C_COMPILER_LAUNCHER=sccache" >> $GITHUB_ENV
     echo "CMAKE_CXX_COMPILER_LAUNCHER=sccache" >> $GITHUB_ENV
```
