

Catch2 and meson

Rohit Goswami · 2025-07-26 · meson · cpp · build · tests

When specifying `main` manually, this will suffice:

```
test_deps = _deps + dependency('Catch2')
```

Which will pick up the `pkgconfig` configuration typically. However, to use the `main` which comes with `catch2` it is easier to use `cmake`:

```
test_deps += dependency(  
    'Catch2',  
    method: 'cmake',  
    modules: ['Catch2::Catch2WithMain'],  
)
```

The rest of the tests can be setup via auto-discovery [as discussed before](#).
