

D3 for Git

Rohit Goswami · 2020-03-16 · tools · rationale · workflow · ideas

Background

- I have had a lot of discussions regarding the teaching of `git`
- This is mostly as a part of [the SoftwareCarpentries](#), or in view of my [involvement with univ.ai](#), or simply in every public space I am associated with
- Without getting into my views, I just wanted to keep this resource in mind

The site

- Learning `git` is a highly contentious thing
- People seem to be fond of GUI tools, especially since on non *nix systems, it seems that there is a lot of debate surrounding obtaining the `git` utility in the first place

One of the best ways of understanding (without installing stuff) the mental models required for working with `git` is [this site](#)

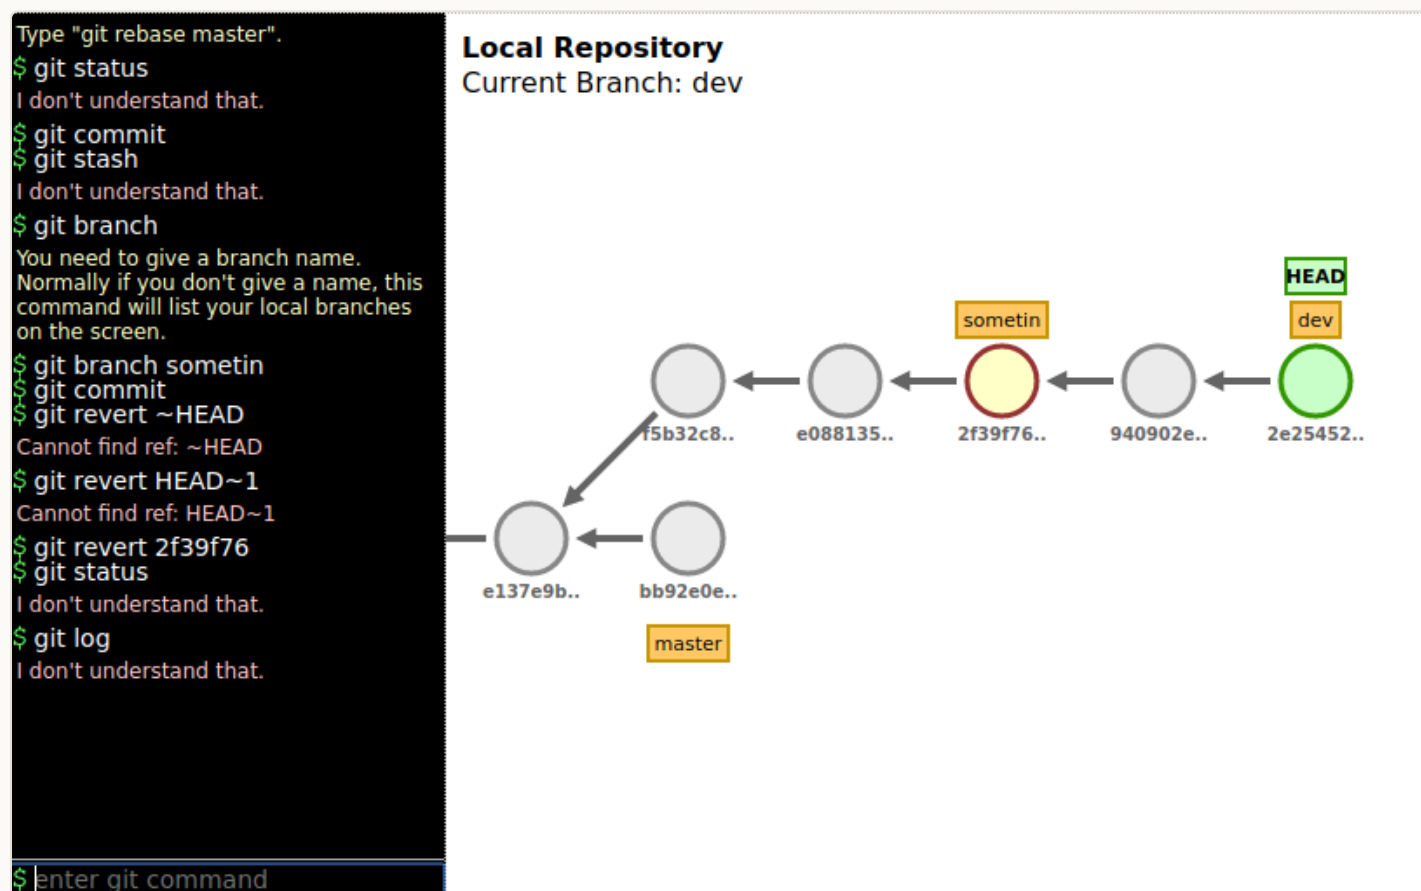

Figure 1: A screenshot of the site

- However, as is clear, this is not exactly a replacement for a good old command-line.
- It does make for a good resource for teaching with slides, or for generating other static visualizations, where live coding is not an option
