

Mesa Bugs with Sway

Rohit Goswami · 2025-01-26 · ramblings

Recently upgraded my system only to have `sway` crash with an `egl` error, which was odd, given that I'm on an Intel GPU. At first it seemed to be a `glvnd` bug, as noted from the `sway` issue tracker, but it turned out to be a `mesa` bug. Can be worked around with `WLR_RENDERER=pixman sway` which uses software only rendering.

Another issue was having to handle the groups on the `/dev/dri/renderD128` which needed `sudo usermod -a -G vglusers $USER`.
