

Notify on pdf compilation

Rohit Goswami · 2025-10-04

Watching a `pdf` render from `org-mode` generated `tex` files is an exercise in futility. A simple `watchexec` command with a notifier is much nicer.

```
watchexec \  
-e tex -e bib \  
-- \  
sh -c '  
# Main source file – change this if you compile a different document.  
src="rgDraft_I.tex"  
pdf="${src%.tex}.pdf"  
  
# Run Tectonic with shell-escape enabled.  
if tectonic -X compile -Z shell-escape "$src"; then  
  notify-send \  
    -u normal \  
    -i document-save \  
    "✅ TeX compiled" \  
    "$pdf ready"  
else  
  notify-send \  
    -u critical \  
    -i document-save-as \  
    "❌ TeX compilation failed" \  
    "Check terminal for error messages"  
fi  
,
```

Could become a more full fledged script later.
