

Continuing numbered Org lists across intervening paragraphs

Rohit Goswami · 2026-06-12 · orgmode · tex · workflow

Org mode numbered lists can mislead when ordinary paragraphs sit between items. This often appears when each numbered item has a short explanatory paragraph. The source can look numbered:

```
1. *[First item]* ...  
  
Extra notes for the first item.  
  
2. *[Second item]* ...  
  
Extra notes for the second item.  
  
3. *[Third item]* ...
```

but Org emits a fresh `enumerate` block after each intervening paragraph, so LaTeX prints each later item as 1. .

The fix uses an Org counter cookie. Place the cookie after a real ordered-list marker:

```
1. [@2] *[Second item]* ...  
  
Extra notes for the second item.  
  
1. [@3] *[Third item]* ...  
  
Extra notes for the third item.  
  
1. [@4] *[Fourth item]* ...
```

The tempting shorthand fails:

```
[@4]. *[Fourth item]* ...
```

That line lacks an ordered-list marker. With Org mode 9.7 it exports literally as `[@4].` in the LaTeX/PDF path.

The corrected export carries an explicit LaTeX counter before each item:

```
\begin{enumerate}  
  \setcounter{enumi}{3}  
  \item \textbf{[{}Fourth item]} ...  
\end{enumerate}
```

For a quick regression check, inspect both the intermediate `.tex` and the rendered PDF text:

```
make export
rg -F '\setcounter{enumi}{3}' document.tex
pdftotext -layout document.pdf - \
| rg '^[:space:]*4\. \[Fourth item'
```

That catches both failures: no LaTeX counter, and a PDF that prints another **1.** where the fourth item belongs.
