

On-boarding for Code in Place

Rohit Goswami · 2020-04-10 · ideas · teaching · cs106a

Background

A few weeks ago, I ended up recording a video for the [Stanford CS106A: Code in Place](#) initiative (which can be [found here](#)). I heard back a while ago, and am now to lead a section for the course!

I'll probably be making a series of short posts as this process continues.

On-Boarding

This was very reminiscent of the [Carpentries instructor training](#), which makes sense, given how well thought out that experience was.

We started out with a pre-presentation where people were able to just spitball and connect, which is pretty neat.

One of the interesting parts of this, was the idea of **interactive recorded lectures**, where the professors will be watching lectures with the students. The entire slide deck [is here](#).

The other great idea for this kind of long course was the idea of having a Tea room and a Teachers lounge where people can just tune in to chat.

Caveats

A couple of things which keep cropping up for online teaching in general are the following:

- Zoom does not have persistent chats, so an auxiliary tool like an [Etherpad](#) is great
