

CS106A Section Meeting I

Rohit Goswami · 2020-04-17 · teaching · cs106a

Background

As I mentioned [earlier](#), I'm leading a section for [Stanford CS106A: Code in Place](#). I did also mention I'd try to keep a set of short notes on the process. I finally had my first section meeting!

Preparation

I went through the following:

- Sent out a welcome message
- Detailed the workflow
- Set up a HackMD instance
- Set up some slides in `beamer` [^fn:1]

However, after that, I was still concerned since I didn't get much of a response on the ice-breakers for EdStem. Thankfully, everyone showed up.

Teaching

- I had a fabulous session, and we went through a variety of concepts.
- Didn't spend much time on icebreakers, but did get a feel for where the students stand on the functional vs imperative programming paradigms
- Possibly because of working through two different approaches, the 40 minute long session went on for two hours and fifteen minutes.
- Some students had more of a background than the others, thankfully computational thinking is not normally taught very well

Conclusion

- The notes are [visible here](#), and the session was [recorded here](#) [^fn:2]
- It was fun, and I hope the students enjoyed it as much as I did.
- I will probably expand this in terms of the concepts covered, to give the students more of an overview of what was covered
