

Sharing Bluetooth Keys

Rohit Goswami · 2024-07-28 · dualboot · config · win

Re-pairing bluetooth devices in Windows and Linux is annoying. [^fn:1] The ArchWiki article on [bluetooth mouse management](#) provides a link to a [helpful gist](#). Combined with the bitlocker [setup](#) described earlier, and this patch:

```
wget
"https://gist.githubusercontent.com/5shekel/8b4998a69903438a6aac2f01a44463d3/raw/622a55c3a5bc1929369047c831a3f10e6988a195/export-ble-infos.py"
# Comment out config['LocalSignatureKey']['Key'] = read_reg('CSRK', 'hex16')
# If there's an error
python export-ble-infos.py -s "/media/Windows/Windows/System32/config/SYSTEM"
sudo bash -c 'cp -r ./bluetooth /var/lib'
sudo systemctl restart bluetooth.service
rm -rf bluetooth
```
