

42nd Annual Conference of the Tex Users Group

Rohit Goswami · 2021-08-07 · presentations · ramblings · docs

A meta-post on social events and my presentation at TUG21

Background

Much the same as the rationale behind my other presentation [meta-posts](#), but with some added shilling; since TUG is fantastic. Plus like the last year, I was given the opportunity to coordinate social events with Jennifer Claudio.

Social Events

- Since the 41st TUG in 2020; there is a Zulip instance which is active all year round [^fn:1]
 - Can be [joined here](#)
- This year there was a Topia instance for more “pseudo-real” interactions
 - Details sent to [people who registered](#) (free)

Slides

Title

Continuous Integration and TeX with Org-Mode

In this talk I would like to introduce the usage of TeX and templates along with generating ad-hoc class and style files for working with orgmode. In particular, I will highlight also the process by which literate programming practices can be implemented with babel. This allows for a more native and flexible alternative to vendor locked in systems like Jupyterlab which rely on JS based inelegant approaches towards TeX typesetting. Finally, I would like to go into how to leverage CI methods for TeX workflows augmented with git.

- A `pdf` copy of the slides are embedded below
- The `orgmode` source is here on the [site's GH repo](#)

Video

- As seen in the [schedule](#):

Thoughts

- We had a Zulip channel and separate streams for each talk
 - This was a bit confusing for some participants
- Some people preferred Topia because of the point and click interface
 - However browser support and low connectivity were a problem

Conclusions

The `TeX` community is one of the best online communities around. There aren't any friendlier or better versed in the topics presented, so this is definitely a group I hope to continue to be a part of. There were some great suggestions for developing the concepts further to make things more user friendly as well; which might be great fodder for another presentation next year perhaps. Plus there's [TUGBoat](#).
