

Watching Files

Rohit Goswami · 2021-09-19 · productivity · cmdline · ruby · rust

My personal favorite for watching files and running context sensitive commands is to use the lovely [filewatcher CLI](#) utility written in Ruby.

```
gem install filewatcher
gem install filewatcher-cli
```

This can then be used with:

```
filewatcher '**/*.js' 'node $FILENAME'
```

However this hasn't been updated in a while now **and fails** on newer versions of Ruby. So now I use [watchexec](#).

```
cargo install watchexec-cli
watchexec -w source/f2py 'make html'
```
