

Zotero Connector and Blog Posts

Rohit Goswami · 2023-08-23 · zotero · references

It so happens that **only** a precious few generators are recognized for parsing blog-post entries into Zotero, that is:

```
<meta name=generator content="Wordpress">
<!-- or -->
<meta name=generator content="Blogger">
<!-- or -->
<meta name=generator content="Wooframework">
```

This is really rather silly to put on say, a `hugo` generated site, but since the embedded metadata-parsing is so much better, it kind of makes sense to do so as a stop gap solution.

The code which handles these `meta` tags for `blogPosts` can be [seen upstream](#). Will be fixed by [this PR](#) soon enough hopefully.
